

# STOP! "Bullet Climbing"

Bullet Climbing, or dangan tozan, means to climb throughout the night without taking sufficient rest on the previous day. It is quite dangerous.

Please allow yourself plenty of time, and enjoy a safe climb.

## **Altitude** sickness

Because the altitude is high. there is the possibility of altitude sickness. Climbers who have not properly slept are more prone to injuries and illnesses.

- ✓ Moderate climbing plan

## **Hypothermia**

Temperatures at the summit may drop to below freezing point even in summer. Bullet climbing increases the risk of hypothermia.

- ✓ Take sufficient rest
- ✓ Prepare protection against cold

#### Crowded path

Around the summit may be incredibly crowded with bullet climbers. It may run the risk of an accident.

- ✓ Adjust time by staying at mountain huts
- Take part in a guided tour

#### Risk of fall/ Falling rocks

Due to darkness. mbers are more use rocks to fall. of an accident.

- ✓ Keep concentration
- ✓ Climbing at your own level
- ✓ Wear a helmet
